

Industrial Wiring Devices

Innovation is what distinguishes Cooper Industrial Specification Grade wiring devices from the “business as usual” products you may be used to. It is the philosophy that defines our approach to product design and development: that even the best devices can always be made better...stronger...safer...more reliable...easier to install.

As you evaluate the products offered on the following pages, take conscious note of the many exclusive and ingenious features that make our products a superior value for both the customer and the installer. They constitute only a representative sampling, but demonstrate our commitment to always searching for ways to make our products better. We won't settle for anything less; neither should you.

It's simple. Our industrial specification grade products give you more diversity, more features, more quality, and more attention to detail in the products that you need the most — so why deal with anyone else?

Take locking devices, for example. Cooper Wiring Devices manufactures more than 700 separate devices in 10A, 15A, 20A, 30A, 50A, and 60A ratings. That includes conventional and California Standard styles, and watertight, insulated, isolated ground, corrosion-resistant, and midget products in the widest range of NEMA and non-NEMA configurations you'll find anywhere. And that's just a part of one of the most comprehensive offerings of industrial specification grade products in the industry.

As with all Cooper devices, quality is the common denominator. Extra-heavy-gauge steel and copper components, unbreakable glass-reinforced nylon, and other premium materials deliver superior performance and durability. Sophisticated automation and robotic systems employed at high-volume, state-of-the-art manufacturing plants around the world ensure consistently excellent quality. We just don't meet basic UL requirements: we far exceed them — a fact we constantly verify in our proprietary, UL-sanctioned testing facilities. Every industrial specification grade product is backed by a Limited 10-Year Warranty.

As unforgiving as our own rigorous standards may be, meeting them just isn't enough. We have to meet yours. Put Cooper to the test on your next wiring project. After all, "Wiring" is our middle name.
