

Locking Devices 50 & 60 amp

Only Cooper offers 50A locking devices in three different body styles.

Nylon Safety Grip™, nylon AutoGrip™, and Armored 50A designs give you the option of internal or external clamping and your choice of rugged housing—highly impact-resistant nylon or durable stainless steel. We manufacture California Standard, Standard, and Marine style devices, and inside each you'll find a glass-filled nylon body that demonstrates excellent heat characteristics. All provide outstanding performance and durability under the most challenging environmental conditions. We also manufacture a complete line of 50A and 60A plugs and receptacles for mobile x-ray equipment that features our Power-Lock® safety design that eliminates external arcing.
