

Manual Contactors & Disconnects

Our specification grade motor control contactor switches pack superior performance into the industry's smallest package.

These workhorse switches perform like thoroughbreds. Our AC and AC-DC manual contactor switches feature a compact, robust design with switch contact that you can depend on.

How compact? We offer UL-rated 60A/600V switches that are half the size of any competitor's product! And no other manufacturer supplies a broader selection of horsepower rated contactors. That's why many consider ours to be the best line of industrial switches in the industry.

The same is true for our durable and watertight enclosed disconnect switches—fused and non-fused—that meet all applicable OSHA, NEC and NEMA Lockout/Tagout requirements for control of directly wired, high-wattage equipment.
