

Straight Blade Plugs & Connectors

Five different body styles make our hospital grade plugs and connectors your most versatile option.

Cooper's line of hospital grade plugs and connectors is broad and flexible enough to meet any requirement or set of personal preferences, with five styles of plugs and three styles of connectors. Nylon Safety Grip™ designs offer the external clamping that many prefer, while our nylon AutoGrip™ series features the convenience of an automatic, internal cord grip. Quickeze® nylon plugs eliminate assembly screws with a twist-on cover. Quick Grip™ nylon plugs wire quickly with one-piece design and quick drive screws. And select configurations of our nylon and thermoplastic plugs and connectors provide external clamping and a see-through body for inspecting connections.

Safety Grip™ and AutoGrip™ plug and connector designs feature a unique neoprene gasket at the cord entry to block out moisture and dirt. And, of course, every plug and connector Cooper makes is constructed from the finest, most durable materials available.
