

# Watertight and Insulated Plugs & Connectors

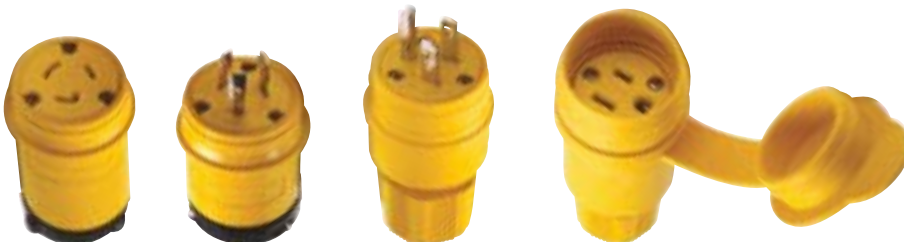

No major manufacturer supplies more configurations of rugged watertight and insulated devices.

**W**e not only offer more devices, we build our watertight and insulated plugs and connectors to last. Their high-quality thermoplastic elastomeric exteriors easily outperform traditional rubber housings when it comes to resisting the effects of moisture, chemicals, oils, ultraviolet radiation and ozone.

Assembly and cord-grip screws are manufactured in stainless steel, and we nickel plate every contact, blade and terminal screw for optimal corrosion resistance. All come with high visibility safety yellow housings for easy identification.
