

Wire Mesh Grips

Our grips handle a wider range of cable diameters, so you can do more with less.

Cooper offers the most flexible line of wire mesh grips to suit a wide variety of industrial support, strain relief and pulling applications. Our product selection includes mesh types, including closed mesh, lace closing, and rod closing designs, and six different eye types. And since our grips accept wider diameter cables than competitive products, you can stock a smaller number of styles and sizes and still meet any industrial need. Galvanized steel or tinned bronze wire are standard, but we can substitute stainless steel at your request.
